

Choc Tops – Hygiene

Remember to keep the dipping container lids closed between dips to prevent contamination. Between dips, scoop out any visible Soft-Serve drips that stay behind in the dipping compound after removing the cone.

If the dipping compound becomes tainted with Soft-Serve or ice cream which cannot be scooped out, it may prevent a complete cover of the cone. At this point it may become necessary to discard whatever dipping compound is left in the dipping container then clean the container, sanitise and dry it and start over with a fresh dipping compound.
