

How to mix Frosty Ice

1. Pour 7L of water into the graded mixing container.
2. Open one bag (1.1kg) and add to water. Stir until dissolved.
3. Accurately measure the Frosty Boy flavour colour concentrate of your choice (approximately 10mL per litre of neutral slush, so 80mL to one bag of Frosty Ice – this can be changed to taste).
4. Pour into the mix and stir again. It is now ready to freeze down.
