

How to mix Frosty Boy Soft-Serve Frozen Yoghurt

1. Pour water into Frosty Boy mixing bucket up to the 3.5L line for 1.5kg bags or fill to 7L line for 3kg bags (the bucket holds approximately 18L).
2. Open the Soft-Serve bag and slowly pour the Soft-Serve powder into the water while whisking with a wire whisk (never pour powder into bucket first and then the water).
3. Continue to stir for 30 seconds after the last base has been poured into the water or until the sugar has dissolved.
4. Put the lid on the bucket and stand for 10 minutes before pouring into machine. Alternatively, place the bucket in the fridge for later use.
5. Liquid mix can be stored in the refrigerator for up to 5 days. Never freeze the liquid mix.
