

How to mix Frutina naturals

1. Measure and pour 10L of water into a Frosty Box mixing bucket or container.
2. Open a Frutina slush concentrate bottle and add 2L to the water.
3. Stir well and pour it into the slush machine, and then freeze down.
4. You can also mix extra backup stock and keep it in the refrigerator to freeze down later. Refrigerated mix will freeze down faster and speed up time to serve.
