

Maintenance

Soft-Serve machines can be compared to a car, particularly when it comes to maintenance. They both have motors, belts, pulleys, parts that need lubrication and parts that wear out. Regular scheduled maintenance is important to ensure your Soft-Serve machine lasts for years.

Scheduled maintenance:

It is recommended that Soft-Serve machines get at least one complete service annually for normal use, but twice a year for machines in high volume stores.

Replacing parts that wear out:

- Seals and O-rings must be replaced every 3 months.
- Machines using metal blades on the beater assembly need to be replaced every 6 months.
- Machines using plastic blades on the beater assembly need to be replaced every 3 months.
- Machines where the beater assembly is also the blade need to be replaced every 2 years for plastic and every 3 - 5 years for metal. Check the machine supplier's recommendations.
